

Emotion in Media - Emotive Track User Manual

Scope and Purpose:

The emotive track is designed to deliver emotion that comes across in video media with audio whether that be through music, sound effects or tone of voice. The key feature in this track is emotion itself, but another one is colour. Colour is a key feature in this emotive track as each emotion is assigned its own colour, and viewers can immediately recognise the emotion without having to read it, this is of course after using the emotive track a few times. The emotive track will help people who struggle with conveying emotion from facial expressions, the Deaf and Hard of hearing, and it will benefit everyone as a whole.

This user manual will guide you on how to use the website.

How to use:

This website is compatible with PCs so can you please access this website using a PC (this includes computer desktops and laptops). To play video, click the play button that is displayed alongside other video controls. The video controls may appear as soon as the page is loaded, or you may need to hover over the video for the control to be displayed.

Once the video has started, the emotions should appear onto the video and most importantly next to the video. This should run time-aligned with the video. Please do not play the video in full screen mode otherwise, you will not be able to view the track being displayed alongside the video. It will appear under 'Emotion should show up here:'.
